Description

Overview

The Digital Calipers – Long Jaw are precision measuring instruments designed for accurately measuring deep, wide, and hard-to-reach external dimensions, as well as internal dimensions and step measurements. The extended jaws provide greater reach than standard digital calipers, making them ideal for measuring large components, deep recesses, and difficult-to-access areas. A clear digital LCD display provides quick and easy-to-read measurements with high accuracy and repeatability.

Common Uses

The Banka Digital Long Jaw Caliper is widely used for measuring deep components, large workpieces, recessed areas, shafts, housings, machine parts, and other difficult-to-reach dimensions during manufacturing, machining, inspection, maintenance, and quality control operations. It is an essential precision measuring instrument for CNC machining centers, machine shops, automotive industries, fabrication workshops, tool rooms, quality control laboratories, and precision engineering facilities, where extended measuring reach, high accuracy, and fast digital measurement are essential for reliable dimensional inspection.
