Features

- Precision-engineered Dog Carrier / Lathe Dog
- Heavy-duty cast iron or forged steel construction
- Secure clamping screw for firm workpiece holding
- Available in straight-tail and bent-tail designs
- Clamp-type versions available for wider workpiece capacity

- Suitable for round, square, and rectangular workpieces (Model Dependent)
- V-groove design available for improved gripping of round jobs
- Excellent rigidity and positive drive
- Available in various sizes and capacities
- Designed for continuous industrial use

Description

Overview

The Dog Carriers, also known as Lathe Dogs or Lathe Carriers, are workholding accessories designed to securely clamp cylindrical workpieces and transmit rotary motion during turning between centers on a lathe. They are used together with a driving plate or catch plate, allowing positive and uniform rotation of the workpiece during machining.

Common Uses

The Banka Dog Carriers are widely used for securely clamping and driving workpieces held between centers during cylindrical turning, taper turning, threading, and other lathe operations. They are essential accessories for conventional lathes, machine shops, tool rooms, automotive industries, fabrication workshops, production units, and precision engineering facilities, where positive workpiece rotation, secure clamping, accurate machining, and reliable performance are essential for producing high-quality components.
