Features

- Precision-engineered ER-Collet
- Manufactured from high-quality hardened spring steel
- Precision-ground internal and external surfaces

- Excellent concentricity and tool alignment
- Uniform 360° tool gripping
- Flexible clamping range
- High gripping force
- Excellent wear resistance
- Available in various ER sizes and bore capacities (Model Dependent)
- Suitable for CNC and conventional machining

Description

Overview

The ER-Collet is a precision tool-holding component designed to securely grip end mills, drills, reamers, taps, and other cylindrical-shank cutting tools in compatible ER collet chucks. Its flexible design provides a strong and uniform grip while maintaining excellent concentricity during machining.

Common Uses

The Banka ER-Collets are widely used for securely holding end mills, drills, reamers, taps, and other cylindrical-shank cutting tools in ER collet chucks during CNC milling, drilling, reaming, tapping, and precision machining operations. They are essential tool-holding components for CNC machining centers, milling machines, production workshops, tool rooms, automotive industries, and precision engineering facilities, where high concentricity, secure tool gripping, low runout, vibration control, and reliable machining performance are essential.
