Description

Overview

This file is triangular in shape and slightly taper at the end. It is available in bastard, 2nd cut and smooth cut geometry. Three square file is used for filing internal angles above 60 degrees and cleaning out the corners, acute internal angles, clear out square corners and in sharpening saw teeth. This file is used by machinists, fabricators etc. and it is ideal for use on wood, metal and plastic. It is manufactured as per IS 1931:2000, BS498:1960 & GGG- F 325 :1985

Common Uses

The Machinist File – Three Square is commonly used in engineering workshops, tool rooms, fabrication units, and maintenance departments for finishing V-shaped grooves, triangular slots, and angled surfaces. Its triangular profile makes it suitable for working on internal corners and narrow spaces that are difficult to reach with flat files. It is also useful for removing burrs, refining edges, and finishing metal components during fitting and assembly operations.
