Features

Crankshaft:

The Crankshaft of our machine is made from SG Iron. To ensure long life, we have done grinding process on it. The crankshaft is connected to the drive which may be an electric motor, turbine, or a diesel engine. As the crankshaft rotates it, in turn, make the connecting rod to move with it thus making the piston to reciprocate.

Connecting Rod:

The Connecting Rod is made with forged/Cast Iron. It indicates heavy duty and long lasting life. The connecting rod connects the piston and the crankshaft.

Piston:

The piston is made from C.I./Aluminium. The piston moves inside the cylinder wall or the linear, reciprocating up and down

Piston Ring:

We are using M Type Piston ring. Piston Ring can ensure high mechanical and thermal loads. Our Compressor Piston Ring is designed in such a way that they meet international quality standards.

Cylinder:

The cylinder is Shell Moulded for robust working. The cylinder head consists of pockets of holding the intake/suction and delivery valves.The filter is usually mounted onto the cylinder head allowing filtered air to enter compressor unit.

Tube:

The tube is made of copper with brass elbows. It is rust proof.
