Features

- Low-friction slideway material
- Excellent sliding characteristics
- Helps reduce stick-slip movement
- Good wear resistance

- Suitable for precision machine tools
- Good dimensional stability
- Provides smooth and controlled slide movement
- Suitable for machine-tool refurbishment
- Can be applied to guideways and mating surfaces
- Designed for long service life

Description

Overview

TURCITE B is a low-friction bearing and slideway material used on machine-tool guideways and sliding surfaces. It is applied to mating surfaces such as lathe beds, saddle guideways, milling machine slides, and other precision machine components to improve sliding performance and reduce friction, stick-slip, and wear.

Common Uses

Turcite B is widely used for reconditioning and rebuilding machine-tool guideways and sliding surfaces, including lathe beds, saddles, cross-slides, milling machine tables, grinding machine slides, and other precision machine components. It is particularly useful where smooth movement, reduced friction, low stick-slip, improved positioning accuracy, wear resistance, and reliable long-term machine performance are essential.
